EDUCATION

The University of Texas at Austin, Austin, TX
Bachelor of Science in Computer Science and Mathematics

May 2029
GPA: 3.66

EXPERIENCE

Longhorn Developers • *Software Engineering Executive Director* Austin, TX • Sept. 2025 - Present

- Promoted from Developer Lead of two teams to Software Engineering Executive Director, setting engineering strategy and standards for 50 engineers across 13 project teams of software engineers, designers, and product managers.
- Lead code review, feature planning, and cross-functional coordination with design, product, and executive teams while mentoring developers across teams.

Relay • *Co-Founder & Technical Lead* Austin, TX • April 2026 - Present

- Co-founded a startup building local, privacy-first AI for law firms alongside two partners; generated interest from 15 prospective users nationwide and applied for external startup funding.
- Lead all technical architecture: optimize local LLM inference (vLLM, Ollama) to fit the largest viable models onto varied client hardware, plus model testing and evaluation.
- Built custom RAG, authentication, and networking systems for secure, on-premise server-client processing of sensitive legal data.
- Ship cross-platform Electron desktop apps and meet with law-firm partners to research features and validate product direction.

Jay Banner Research Group • *IT & Data Analytics Intern* Austin, TX • March 2026 - Present

- Sole software developer for a 20-person UT Jackson School of Geosciences research group, handling all programming and data-analytics needs.
- Migrated 30 years of records—117,000 lab-entry columns across 3,700 sampling submissions—from Excel into a MySQL database using custom Python scrapers.
- Building the group's public Flask website with a custom, UT-security-grade authentication layer, cutting data lookups from a manual Excel process to seconds; it serves as the foundation for the School's migration from PHP to Flask.
- Built an automated form-submission system that enforces correct data entry to standardize all future research submissions.

BioBQ • *Computer Science Research Intern* Austin, TX • August 2024 - June 2025

- Built software to improve cultured-meat production in a team of six students (two projects advanced to continued development) and presented frontier research at an end-of-year fair to students and industry.

Hilliard & Shadowen LLC • *Technical Consultant* Austin, TX • September 2024 - December 2024

- Proposed and secured a sole-developer role; designed and implemented an automation tool for an internal workflow challenge, collaborating with leadership on requirements, timeline, and deliverables.

PROJECTS

Spark (Longhorn Developers) • *Cloudflare Workers, MCP, Durable Objects* 2025 - Present

- As technical lead, built 3 custom MCP servers, connectable to any live AI model, backed by web scrapers and Cloudflare Durable Objects for storage.
- Designed the infrastructure with UT Enterprise to power UT's Spark AI program for 50,000+ UT students.

Degree Audit Plus (Longhorn Developers) • *React, TypeScript, Tailwind CSS, WXT* 2025 - Present

- Primary developer on an open-source Chrome extension, launching this semester, that streamlines 4-year academic planning for UT students; built by LHD, whose sibling extension UT Registration Plus has 60,000+ active users.

HackTX Winner: Politicosmos • *Three.js, React, TypeScript, Next.js, t-SNE* October 2025

- Won 1st place out of 103 teams in the novice category at the 24-hour HackTX hackathon.
- Scraped 100,000 bills from the Library of Congress, then clustered them by topic with a custom tokenizer and t-SNE dimensionality reduction.
- Built a Three.js website that lets users explore the resulting bills in an interactive 3D space, condensing dense legislative data into a simple, navigable interface.

ML: Doppler Imaging & Meat-Quality Detection • *TensorFlow, YOLO, Python* August 2024 - June 2025

- Built Python/ML tools using FFTs on ultrasonic Doppler imaging to non-invasively estimate cell confluency and viability in a bioreactor, plus a custom-trained YOLO model to classify meat samples as viable or spoiled.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python, Java, C, C++, C#, Swift/SwiftUI, HTML, CSS, SQL, AppleScript

Web & App Dev: React, React Native, Next.js, Electron, Flask, Django, AWS, Claude Code, Codex, agent management

AI / ML: vLLM, Ollama, small model inference optimization, model testing, TensorFlow, YOLO, Pandas, NumPy, SciPy

Infrastructure & Tools: deployment, open-source, networking, servers, data security, Git/GitHub, Linux, CLI, Unity
